English — B1 — Intermediate
French — B1 — Intermediate

Skills

HTML5 CSS3 Figma Sass Bootstrap Gulp Git API JavaScript Webpack npm
Swiper.js TypeScript ReactJS WebGL

Additional information

About me

I have been doing front-end development for more than a year, I am captivated by the creative process of creating an attractive and functional interface for users.

I love HTML-coding and continue to learn JavaScript, ReactJS. I am also very interested in TypeScript and Vue.js framework - I plan to master and use them in my work.

I appreciate the possibility of systemic and structural thinking, which is especially important in the field of IT. I am sure that the combination of visual appeal and user interface convenience helps to make any project more successful.

My first education is in linguistics. Knowledge of language structures helps to learn a new technology stack and create high-quality code.

I am open to new things, attentive to details, able to take responsibility for my work and admit mistakes. I am able to maintain composure in difficult situations and always meet deadlines.

In addition to work, I am fond of traveling, I love architecture, cars and animals
